Carrier Objective

I am a B.Tech student specializing in Artificial Intelligence and Machine Learning, currently in my second year. I possess strong technical and soft skills, with a proven ability to analyze problems and lead tasks efficiently. I am eager to secure an job opportunities to gain practical experience and apply my skills in real-world projects

Experience

Amdox Technologies — Remote

Full Stack Developer Intern

Jan 2026 – Apr 2026

- Designed and developed scalable web applications using React.js for frontend and Node.js/Express.js for backend.
- Engineered dynamic and responsive UI components, improving user experience and usability.
- Built and integrated RESTful APIs for seamless communication between frontend and backend systems.
- Implemented efficient MySQL database solutions, including schema design and optimized queries.
- Diagnosed and resolved backend issues, enhancing performance and reducing errors.
- Strengthened understanding of full-stack architecture and database-driven applications.

Tech Stack:

Frontend: HTML, CSS, JavaScript, React.js

Backend: Node.js, Express.js

Database: MySQL

Projects

Developed multiple full-stack web applications during my academic journey, focusing on solving real-world problems in college environments. These projects demonstrate my understanding of the MERN stack, RESTful API development, authentication systems, and building scalable, user-friendly applications. I worked on implementing features like automation, real-time data handling, and secure systems while continuously improving my full-stack development skills.

Weekly Aptitude Test

Developed a full-stack Weekly Aptitude Test System as a college project during my academic learning phase to automate student assessment and improve evaluation efficiency. The platform enables faculty to conduct weekly aptitude tests and monitor student performance through a centralized system.

Implemented features for AI-based question generation as well as manual question creation by faculty, allowing flexible test preparation. Designed secure test-taking functionality with anti-cheating mechanisms, including detection of tab switching, mobile app switching, and message interruptions, automatically disqualifying students if suspicious activity is detected.

The system also includes user authentication, timed tests, result evaluation, and performance tracking, helping streamline the assessment process and ensure fair testing.

Built using the MERN stack (MongoDB, Express.js, React.js, Node.js) with RESTful APIs and an interactive admin dashboard.

Library Management System

Developed a full-stack Library Management System as part of my college project during my 2nd year while learning full-stack development. The system is designed to efficiently manage book records, student data, and borrowing activities within an academic environment.

Implemented key features such as user authentication, book catalog management, issue/return tracking, and real-time data updates. The application includes separate modules for administrators and users, improving usability and ensuring secure access control. This project helped streamline library operations by reducing manual effort and improving data accuracy.

Built using the **MERN stack (MongoDB, Express.js, React.js, Node.js)** with RESTful APIs and a responsive user interface.

Digital Logic Gates Simulator

Technologies Used: HTML, CSS, JavaScript

Developed an interactive web-based Digital Logic Gates Simulator designed to help students better understand fundamental concepts of digital electronics. The application provides a visual and user-friendly interface where users can experiment with different logic gates and observe real-time outputs based on given inputs.

Key Features:

- Implemented core logic gates such as AND, OR, NOT, NAND, NOR, XOR, and XNOR
- Real-time output display based on user inputs
- Interactive UI for enhanced learning and engagement
- Clean and responsive design for accessibility across devices
- Error handling for invalid input combinations

Responsibilities / Contributions:

- Designed and developed the complete front-end using HTML, CSS, and JavaScript
- Implemented logic gate functionalities using JavaScript functions
- Focused on user experience to make learning intuitive and effective

Outcome:

- Improved conceptual understanding of logic gates for students
- Created a practical learning tool for beginners in digital electronics

Technical Skills

Soft skills

- Good communication both written and oral
- Capable for analyzing and problem solving
- Responsible for all the task assigned
- Doing work with timely manner
- Strong leadership and organizational skill

Technical skills

Microsoft Word, Excel (PivotTables, VLOOKUPs), Email communication

Programming Languages: Core Java

Web Technologies: HTML, CSS, JavaScript, Node.js, Express.js

Database Management: MySQL

Tools & Platforms: Git & GitHub, Deepseek AI

Education

- BTech (Artificial Intelligence and Machine Learning) in VEMU institute of technology studying 2nd year with 7.6 CGPA/Percentage
- Intermediate (MPC) – Sri Chaitanya junior college (2022 – 2024) -- 82%
- SSC – Gitam School, Tirupati (2022) -- 72%

Personal Details

Name : K Leela Vinayak
Date of Birth : 15-05-2007
Gender : Male
Father name : K Venkata Muni
Languages known : English, Telugu
Address : Tirupati, Tirupati(urban), Tirupati District , Andhra Pradesh – 517501

Declaration

I hereby declared that the above mentioned information is correct and true to the best of my knowledge and belief.
